

# STERLING Valve Automation

We Serve the Customer First

STERLING Valve Automation introduces a simplified linear actuator solution for gate valve automation. The conventional method of “hanging” position sensing devices on linear gate valve actuators is now replaced with a clean integrated product.

## User Benefits:

- Eliminates the need for externally mounted position sensors, limit switches and linkages that are exposed to physical abuse and harsh working environments
- Allows for remote mounted control accessories and positioners away from the actuator to a cleaner, more easily accessible location for operation and maintenance

## Features:

- A non-contacting Linear Valve Actuator Sensor is an integrated part of the actuator assembly. No adjustments required. No wear points
- 2-in-1 measuring device combining a transducer for full stroke position monitoring and limit switches for both ends of actuator travel
- Can be applied to pneumatic / hydraulic actuators with double acting or spring return operation
- CSA Approved for Hazardous Area Classification
- Low temperature (-50) Deg C service
